# Dreamz Learning E-Mentor for FMGE

## Conventional Chalk and Talk in classroom – the yester year way

- ◆ Live teacher in a conventional classroom delivers to a huge gathering of medical students in a conventional classroom since ages.
- ◆ Student has the disadvantage of losing focus and teacher may miss attention.
- ◆ There is no way to assess the learning milestones while attending teaching session.
- ◆ If a class is missed, teacher cannot come back in Chalk and Talk.
- ◆ If the student wants to pause, review and bookmark the lecture, it cannot be done in a Conventional class.

## E-Learning and Web based Lecture Video on demand - the modern way

- ◆ The best teacher in any part of world is available on the desktop of student.
- ◆ Clinical cases, Surgical video footages, Clinical methods, bedside clinical discussions can all be integrated with video lecture and streamed to desktop of student anywhere in the world.
- ◆ Hours of working in wards for amassing clinical experience and conceptual clarity can be acquired in more faster, scientific and evidence based way on e-learning platform.

## Web based Video conference platform makes the world a global village

- ◆ A consultant cardiologist in Hyderabad can teach ECG to a medical student in a remote hamlet of Russia now.
- ◆ A practicing surgical gastroenterologist from Mumbai can show how he resected gangrenous intestine to an anatomy student in Beijing.
- ◆ A busy obstetrician from New Delhi can teach a third year MBBS student at Singapore on how to diagnose Down's syndrome on Ultrasound antenatally.
- ◆ The mentors from Dreamz Subject Consultant group discusses MCQs on FMGE with our students in China, on the web based Live Video Conference sharing the powerpoint slides.

Question attempted: Time Remaining

All India Test 10002

46. A 32 year old male presents 4 months following cardiac transplantation with fever, non productive cough and progressive shortness of breath. On examination he is febrile and has crackles at both bases. Chest X ray shows diffuse interstitial changes. Correct statements about investigations for the diagnosis of cytomegalovirus include all except:

- CMV light trays identify primary infection
- PCR provides a sensitive method of detecting CMV in blood
- Open lung biopsy is required for diagnosis
- The virus can be identified by the presence of characteristic intranuclear 'owl eye' inclusions

47. The following associations are correct except:

- Indirect immunofluorescence ? detects organ ? specific antibodies
- Particle agglutination ? detection of rheumatoid factors
- Purified protein-derivation (PPD) ? lymphocyte-function
- Concanavalin A ? Activates B lymphocytes
